Partial Years

¹ Returns for 2018 are from 11/30/2018 to 12/31/2018

² Returns for 2022 are from 12/31/2021 to 10/31/2022

Period	Composite Gross Return (%)	Composite Net Return (%)	Benchmark Return (%)
1 Year	24.784	22.354	0.000
3 Year	19.455	17.119	0.000
Since Inception	15.794	13.525	0.000

Description

The **Prime Dividend Jr.** (PDJR) Strategy is similar to the U.S. Prime Dividend Strategy which seeks to invest in the leading U.S. dividend-paying stocks or ETFs. The Prime Dividend Strategy utilizes an intermediate-term tactical overlay to identify whether to be in a bullish posture or defensive posture. When the overlay indicates a bullish posture, the Strategy is fully invested in the Dividend Aristocrats (NOBL) ETF. When the overlay indicates a defensive posture, the Strategy is fully invested in an ETF designed to track the Barclays Capital US Intermediate Aggregate Bond index.

Calculation Methodology

The returns presented are asset-weighted and were calculated by geometrically linking the monthly sub-periods of each year presented. Portfolios which were not included during the entirety of any month were not included in the presented strategy performance for that month. A time-weighted rate of return was used to calculate all periods presented. The presented net returns were calculated by reducing 1/12th of the annual 2% management fee from gross monthly strategy returns. Returns are further reduced by trading commissions and do not reflect the reinvestment of dividends. The 2% management fee applied does not include fees charged by FTA for services other than investment management.

Disclosure

Performance presented reflects the returns of actual portfolios invested in the PDJR strategy and includes only portfolios managed by FTA which are entirely allocated to this strategy. Variances in holdings may have occurred across portfolios invested in this strategy, due to timing of cash flow additions and liquidations or other client-specific constraints, which may have resulted in performance for individual portfolios that is different than that of the returns presented. New accounts invested in this strategy may be invested similarly but not identically to the investments of the portfolios which were used to calculate the presented performance.

All investments carry with them the possibility of loss.
